

# Johnstone's Trade Aqua Guard FAQ

READY FOR  
EVERYDAY  
WEAR &  
TEAR

SURFACE  
PROTECTION  
TECHNOLOGY

## What is Johnstone's Trade Aqua Guard?

Johnstone's Trade Aqua Guard is our most durable Water Based Satin paint for interior wood and metal. With brand new Surface Protection technology, it provides the ultimate defence against scratches, wear and tear and greasy finger marks. It's not just about durability though, Johnstone's Trade Aqua Guard also has advanced application qualities, excellent covering power and long-lasting whiteness.

## What are the main benefits of Johnstone's Trade Aqua Guard?

Johnstone's Trade Aqua Guard contains Surface Protection technology that provides the ultimate defence against everyday wear and tear for interior wood and metal. The innovative technology will not soften or become damaged with the impact of everyday wear and tear. Therefore, providing a long-lasting finish for all interior woodwork including skirting boards, door frames and windowsills.

## What are the limitation with current Water Based trim paints?

Human hands all contain enzymes known generically as "hand fats". When our hands come into contact with interior surfaces these oils are transferred to the paint surface. In traditional water based systems they react with the paint and breakdown the protective surface layers and expose the finish. The finish is then susceptible to dirt, grease and grime which discolours and makes the finish unsightly.

## How does Johnstone's Trade Aqua Guard differ from the existing products in the category?

Johnstone's Trade Aqua Guard is everything that you need and expect from a premium water based paint PLUS the additional durability to ensure a long-lasting result every time.

## Where can Johnstone's Trade Aqua Guard be used?

Johnstone's Trade Aqua Guard has been formulated for use on interior wood and metal.

## Will I need to purchase specialist primers or undercoats?

Johnstone's Trade Aqua Guard is a premium addition to the current Aqua Water Based family. Johnstone's Trade Aqua Guard should be used in conjunction with Johnstone's Trade Aqua Water Based Undercoat for the best results.

## Will Johnstone's Trade Aqua Guard affect my brushes?

No, Johnstone's Trade Aqua Guard will not result in the issues of drying or paint build up on brushes.

## What tools should I use for application?

Johnstone's Trade Aqua Guard can be applied by both brush and roller. The longer working time and flow will allow more time to achieve a smooth, premium surface.

## What colours can Johnstone's Trade Aqua Guard be tinted?

Johnstone's Trade Aqua Guard is available in the full colour range.
