As a leading paint manufacturer, PPG is committed to providing its customers with products that reduce environmental impact.

But PPG’s dedication to sustainability goes beyond just making products. Our innovations are helping to address some of the world’s most pressing problems related to energy, the environment, security and other issues.

PPG’s Ecological Solutions range represents our commitment to making “green” products that are kinder to the environment. Included in the Ecological range is a collection of Johnstone’s paints that have been awarded the coveted EU Ecolabel accreditation.

All Ecolabel accredited Johnstone’s products are manufactured under the ISO14001 Environmental Management System.

Committed to a sustainable future.

Many products in the marketplace claim to be “environmentally friendly”, but amongst all the clever marketing noise, how do customers really know that manufacturer’s claims are true?

The European Ecolabel is the premier EU environmental accreditation. The Ecolabel mark is only awarded to products that meet the highest environmental and performance standards. Stringent tests are used to assess the product’s impact on the environment, from raw-materials, to application and performance.

The Ecolabel logo is a mark that can be trusted by consumers on products that meet these tough standards.

At Johnstone’s, we don’t believe that product performance should be compromised or that a premium price should be charged for eco-friendly alternatives. This is why we have chosen for our existing products to undergo these stringent tests and achieve Ecolabel accreditation.

✓ Same Product
